

Easy Black & White Conversion in Adobe Camera Raw in Three Simple Steps.

Here's how:

- (1) Drag the saturation slider all the way to the left, to remove all the color
- (2) Drag the Shadows slider to the right, until the shadows look nice and saturated
- (3) Drag the Contrast slider to the right, until the photo looks nice and contrasty.

After the conversion, opened the photo in Photoshop and sharpened it using the Unsharp Mask filter.
